TRANSPONDER GUIDE

2008

Simple mechanical auto locks are rapidly losing ground to the next generation of lock technology — transponder keys. In this innovative system, an electronic chip (the transponder) imbedded in the key transmits and verifies a code with the car's on-board computer systems, allowing the car to start. If someone attempts to start the vehicle without the correct programmed key the car will not start.

HOW A TRANSPONDER KEY WORKS. AND WHY IT CAN WORK WONDERS FOR YOUR BUSINESS.

Transponder technology represents a major advance in theft protection — and a profitable opportunity for you. Since its introduction in 1996, transponder key use has grown to over 70 million cars in North America today. And with replacement costs currently averaging \$50 to \$300 per key, your reward in servicing the technology will match the vehicle owner's satisfaction of being protected by it.

**GENERAL MOTORS*
PK3 & + “CIRCLE-PLUS”**

ADD DUPLICATE KEY: (Requires at least one working key):

- 1) Verify that the new key has “PK3” or “+” stamped on it.
- 2) Insert the original, already programmed key in the ignition and start the engine. If the engine will not start, see your dealer for service.
- 3) After the engine has started, turn the key to off and remove the key.
- 4) Insert the key to be programmed and turn it to on within 10 seconds of removing the original key.
- 5) The security light will turn off once the key has been programmed. It may not be apparent that the security light went on due to how quickly the key is programmed.

(If your vehicle does not have a security light (04-07 Grand Prix, Bonneville, Impala), wait 10 minutes 45 seconds to make sure the key has been programmed)

6) Repeat steps 1 through 5 if additional keys are to be programmed.

* Canadian VIN vehicles excluded. On-board programming not available for these vehicles. In many cases a Tech II or dealer equivalent tool would need to be used.

PROGRAM**

2

**1997 FORD, LINCOLN, MERCURY
1998 NAVIGATOR/EXPEDITION**

ORIGINATE NEW MASTER KEY:

1. Put the new key into the ignition. Turn it to the ON position. The dashboard security light will flash for 15 minutes.
2. Once the dashboard security light stops flashing, you have five minutes to begin Step 2. Turn the ignition OFF and then back to the ON position. The dashboard security light will flash for 15 additional minutes.
3. Repeat of Step 2.
4. Once the dashboard security light has turned off for the third time, the key will be able to function in the car. It has been programmed into the car’s computer and has replaced ALL previous electronic key codes — the computer will not recognize any other key.

ADD DUPLICATE KEY:

1. Put the current key into the ignition.
2. Turn the ignition ON and back to OFF.
3. Remove the current key and insert the new key, turning it ON. You MUST do this within 15 seconds.
4. The security light will switch on for two seconds, confirming that the key has been successfully programmed into the vehicle.

1998+ FORD, LINCOLN, MERCURY

ADD KEY (requires two working keys):

1. Put a current key into the ignition.
2. Turn the ignition to ON, then back to the OFF position.
3. Remove the key and insert a second key. Turn it ON and back to the OFF position. You MUST do this within five seconds.
4. Before ten seconds have elapsed, put a new key in and turn the ignition ON. After one second, turn the key back to the OFF position.
5. The dashboard security light will glow for three seconds. This confirms the programming of the new key has been successful.

PROGRAM

4

1998 MAZDA 626

ORIGINATE NEW MASTER KEY or ADD KEY:

1. Put new key into ignition and turn it ON. Turn back to the LOCK position. Repeat this five times rapidly — the lock cannot stay in any one position longer than one second during Step 1.
2. Turn the key to the ON position. The dashboard security light should flash. In the next 20 seconds, turn the key to LOCK. The key should rest in that position for five minutes. After this time has elapsed, the security light's rate of flashing will be much slower.
- 3) Enter the 8 digit word code. The word code is unique to each Immobilizer Unit.
- 4) You can obtain the word code by giving Mazda the vehicle's Immobilizer Unit serial number or by using the Code-Seeker if you have the Mazda software.
- 5) Turn the ignition ON while watching the security light (the security light is not on at this time). When the security light begins to flash, count the number of flashes. When the number of flashes equals the first digit of the word code, turn the key back to the LOCK position.
- 6) Within 30 seconds, turn the key to ON and count the flashes. When the number of flashes matches the value of the second digit of the password, turn the key back to the lock position.
- 7) Repeat Step 6 until all eight word code digits are entered. NOTE: Do not turn the vehicle on or off while the security light is on.
8. The password has been entered successfully when the dashboard security light remains on with no flashing.
9. Start the vehicle. Within two seconds, the security light should turn off.
10. Thirty seconds after the last key has been removed, the vehicle will return to normal operation, ending the programming mode.

- 9. Remove the newly programmed coded key from the ignition.**

If the key has been successfully programmed, it will start the vehicle's engine and will operate the remote entry system (if the new key is an Integrated Keyhead Transmitter). The theft indicator light will illuminate for 3 seconds and then go out to indicate successful programming.

If the key was not successfully programmed, it will not start your vehicle's engine and/or will not operate the remote entry features. The theft indicator light may flash on and off. Wait 20 seconds and you may repeat Steps 1 through 8. If the failure repeats, bring your vehicle to your authorized dealer to have the new key(s) programmed.

To program additional new unprogrammed key(s), wait 20 seconds and then repeat this procedure from Step 1.
